Fit in Every
Dimension**

3wedge

Directa USA is pleased to announce the release of the new 3wedge™ Interdenal Wood Wedges by Polydentia - designed to withstand the forces exerted during dental procedures while providing exceptional stability and reliability for both dentists and patients.

FEATURES & BENEFITS

- Triangular Shape – Enhances fit, separation, and matrix stability
- Birchwood Material – Soft, pliable, and non-splintering for gentle placement
- Smooth Finish – Minimizes tissue trauma and improves control
- Rounded Tips – Prevents gingival injury
- 4 Sizes (S, Skinny, L, Jumbo) – Adapts to various interproximal spaces

Triangular by Design. Stable by Nature.

The 3wedge's precise triangular cross-section is engineered to provide consistent, controlled interdenal separation. This shape improves fit and stability in the interproximal space, keeping the wedge securely in place. It also supports matrix bands for reliable retention and tight contacts during Class II posterior restorations, resulting in better clinical outcomes, easier handling for clinicians, and increased patient comfort.
